* LeetCode -> 88. Merge Sorted Array
*/
public class Main10 {
   public static void main(String[] args) {
       int[] nums1 = \{1, 2, 3, 0, 0, 0\};
       int[] nums2 = {3,4,5};
       merge(nums1, nums2);
   1 usage
   public static void merge(int[] nums1, int[] nums2) {
       Arrays.stream(IntStream
                .concat(IntStream.of(nums1), IntStream.of(nums2))
                .sorted()
                .toArray())
                .forEach(System.out::println);
```

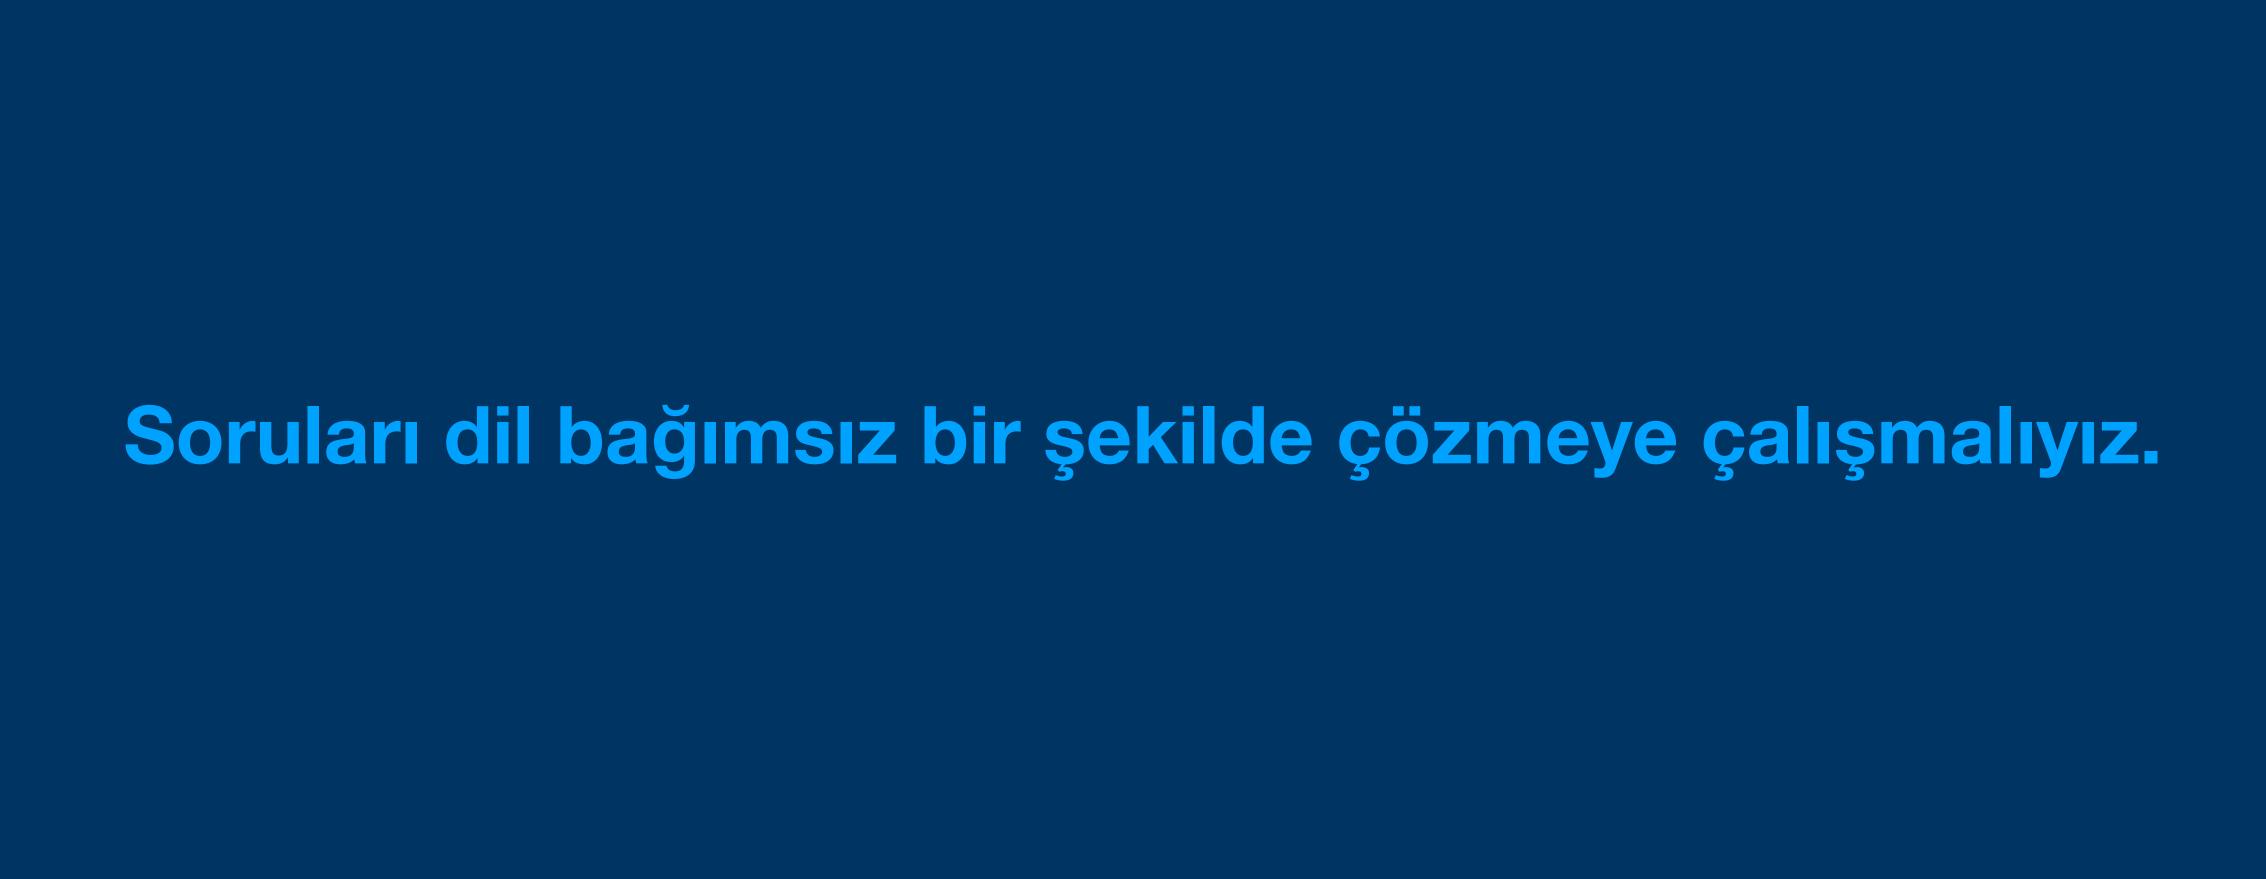

```
public static void main(String[] args) {
     String msg =
               turkiye java community ve community turkiye
               java ama ayni zamanda da
               community java turkiye
                \scriptstyle\rm II \scriptstyle\rm III \scriptstyle\rm II
     duplicateWords(msg);
```

```
1 usage
public static List<String> duplicateWords2(String sentence) {
    Map<String, Long> duplicateWords = Arrays
            .stream(sentence.split(regex: " "))
            .collect(Collectors.groupingBy(Function.identity(), Collectors.counting()));
    return duplicateWords
            .entrySet() Set<Entry<...>>
            .stream() Stream<Entry<...>>
            .filter(item -> item.getValue() > 1)
            .map(Map.Entry::getKey) Stream<String>
            .toList();
```

```
2 usages
public static List<String> duplicateWords(String sentence) {
    List<String> stringList = new ArrayList<>();
    String[] arr = sentence.split(regex: " ");
   Map<String, Integer> duplicateWords = new HashMap<>();
   for (String item : arr) {
        if (duplicateWords.containsKey(item)) {
            duplicateWords.put(item, duplicateWords.get(item) + 1);
        }else duplicateWords.put(item, 1);
   for (Map.Entry<String, Integer> entry : duplicateWords.entrySet()) {
       if (entry.getValue() > 1) {
            stringList.add(entry.getKey());
    return stringList;
```

Algoritma çözerken nelere dikkat etmeliyim.?

```
/**
* LeetCode -> 217. Contains Duplicate
 */
public class Main41 {
    public static void main(String[] args) {
        System.out.println(containsDuplicate(new int[]{2,14,18,22,22}));
```

```
1 usage
public static boolean containsDuplicate(int[] nums) {
    for (int \underline{i} = 0; \underline{i} < nums.length; \underline{i}++) {
         for (int j = i+1; j < nums.length; <math>j++) {
              if (nums[i] == nums[j]) {
                   return true;
    return false;
```

Veri yapılarını kullanmaya çalışmalıyız.

```
1 usage
public static boolean containsDuplicate2(int[] nums) {
    if (nums.length == 1) return false;
    Set<Integer> items = new HashSet<>();
    for (int num : nums) {
        items.add(num);
    return items.size() != nums.length;
```

```
public static void main(String[] args) {
    System.out.println(searchIterative(new int[]{3,4,5,6,10,12}, target: 10));
}
```

```
public static int searchIterative(int nums[], int target) {
    int index = -1;
    int low = 0;
    int high = nums.length - 1;
    while (low <= high) {</pre>
        int mid = low + ((high - low) / 2);
        if (nums[mid] < target) {</pre>
           low = mid + 1;
        } else if (nums[mid] > target) {
            high = mid - 1;
        } else if (nums[mid] == target) {
            index = mid;
            break;
    return index;
```

Özellikle Time Complextiy'ye dikkat edilmelidir.

Satır sayısının az olması, kodun hızlı olacağı anlamına gelmez. ((:

(Code Complexity, Code Readability)

```
public static void main(String[] args) {
   int arr[] = {-4, -1, 0, 3, 10};
   System.out.println(sortedSquares3(arr));
}
```

```

    return array;
```

Algoritma Çalışamk İçin Son Tavsiyeler

LeetCode, CodeWars, Project Euler

Kağıt Kalem kesinlikle kullanılmalı

Başkalarının kodları okunmalı

Kodlar C'de yazılmalı

Aklınıza gelen her şeyi yazın

Gördüğünüz her algoritmayı önce kağıda yazarak anlayın, sonra onu kodlayın (Bilinen Algoritmalar)

Kolaydan başlayın. Örneğin 2 sayıyı toplayın.
